

# B & I SECURITY FENCING

## SFA SERIES

## SFB SERIES

## Security - Durability - Economy

B & I Security Fencing is made from high strength cold-rolled wires that are electrically resistance-welded together. The durability of the fencing panels are enhanced through hot-dipped galvanizing for resistance against corrosion and thus maintenance free. Unlike chain-link fencing, it is not easily cut and will not eventually collapse overtime. Change only the 2.2m fencing panel if there is serious damage.

Apart from aesthetics, there are many creative uses to demarcate and to prevent trespassing. It is widely used in commercial, industrial, residential and recreational projects such as gated communities, golf courses, sports stadiums etc.
